## About RainBarrel.ca

All of our open top rain barrels are repurposed food grade barrels that were used to import fruits and vegetables into Canada. They are the most environmentally friendly rain barrels on the market.

They are retrofitted and washed before being stored outdoors. The moment you hook a barrel up to a downspout and it rains, the interior of the barrel collects all the dirt and debris from the roof and gutters, so we do not attempt to clean the interiors thoroughly.

The product description describes them as repurposed and the aesthetics can vary from nearly new to well used. If you would like to paint your rain barrel, Krylon Fusion spray paint is recommended.

## How do rain barrels work?

1. Rain falls through the downspout from the roof and enters the rain barrel through the mosquito screen and filter.
2. When ready to use the captured rainwater, simply turn the spigot at the bottom to open the tap.
3. If the barrel fills completely excess water can escape and travel away from the barrel through the overflow hose

## Delivery Options

School Pick Up Estimated Date May 13, 2026  
Home Delivery on May 13<sup>th</sup> (starting at \$10 per barrel)

\*To guarantee this pick up and delivery date the school must sell a minimum of 300 rain barrels. If this target is not met our rain barrels will be delivered within a timely manner combined with another fundraiser
